DATASHEET

DniPro Tourniquet Gen 2

The DniPro Gen 2 windlass tourniquet is manufactured in Ukraine and has over 200,000 units in active service in the current war effort and is proven in the battlefield more than any other tourniquet currently available.

It is fully certified under the MDR 217/745 with both 13485: 2106 and 9001 :2015 quality management systems.

The Gen 2 has been designed to be atraumatic, with a low level of associated pain sensation, applying the necessary strength and fixation to maintain the ideal level of pressure for fast and effective haemostasis.

- New fastening of the belt (easy removal and increased rigidity)
- Reinforced internal sling (strong enough to not break from twisting, but it is easy to rotate the handle)
- External buckle lock (fixes the buckle when tucking in the belt)
- Duralumin handle of a new shape (comfortable and reliable in use, with tactical gloves and without)
- Wide velcro on the platform with the cutout (completely closes and securely holds the collar, perforation allows you to quickly find it even by touch)
- Lower fixation from the outer belt under the platform (does not interfere with the rotation of the turnbuckle on the platform and reinforces the platform underneath)
- Metal single-slot buckle (convenient and quick belt filling)
- Platform with six holes and softener (reliable and flexible)
- A soft base between the platform and the buckle (protects the skin and muscles of the limbs between the buckle and the mould form from pinching)
